

## CHAPTER 4. CHEMICAL AND PHYSICAL INFORMATION

### 4.1 CHEMICAL IDENTITY

Nitrophenols (also referred to as mononitrophenols) exist in three isomeric forms: 2-nitrophenol (or ortho- or o-), 3-nitrophenol (or meta- or m-), and 4-nitrophenol (or para- or p-). All three of these nitrophenols are manmade. Table 4-1 lists common synonyms, trade names, and other pertinent identification information for 2-nitrophenol, Table 4-2 lists this information for 3-nitrophenol, and Table 4-3 lists this information for 4-nitrophenol.

#### 4. CHEMICAL AND PHYSICAL INFORMATION

##### **4.2 PHYSICAL AND CHEMICAL PROPERTIES**

2-Nitrophenol is a light yellow, aromatic solid; 3- and 4-nitrophenol are colorless to pale yellow solids. The nitrophenols are expected to be highly soluble in water. They also have low vapor pressures, and therefore, low potential for long range atmospheric transport (Harrison et al. 2005). Tables 4-4, 4-5, and 4-6. List important physical and chemical properties of 2-, 3-, and 4-nitrophenol, respectively.
